

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials designed to be able to endure the most challenging operations and work environments. This particular piece of equipment can enable the one driving to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate more exact carrying and placement in a faster and more effective method.

The blade pocket is rather unique and enables the individual operating it to safely sway the blades into position without any fear of destroying the positioning cylinders. This can allow the operator the choice to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on existing units.
